(Booking location boxes numbered 1–9)
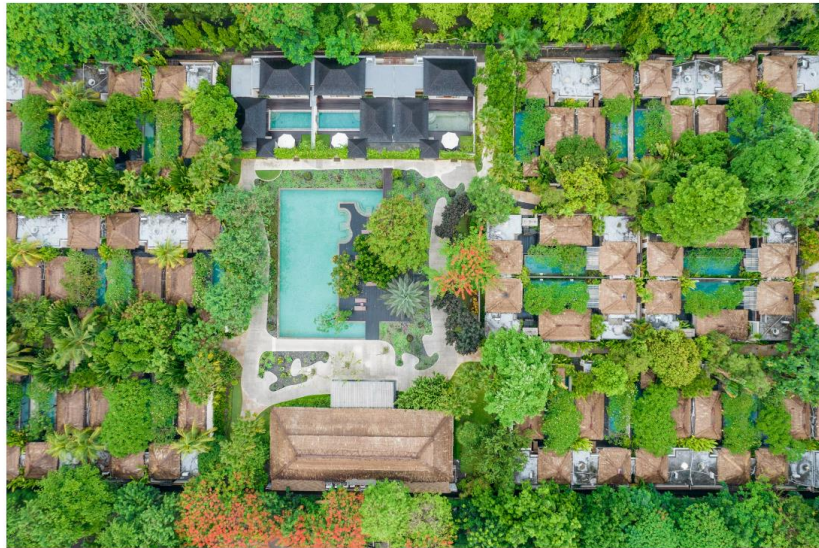

Enter Lodge Number [ ] Select

Booking Details

Lodge Selected:
No. of Adults:
No of Children:
Check in Date:
Check out Date:
Price per night:
Total Price:

Confirm

- Search bar is to search room booking i.e. to find room booking for 2 people
- Layout has details to be filled in one side and then it allows user to select a room number, the bigger the square the more price is it is and more capacity it has.
- The user enters their details views rooms available, and presses "select" then it displays all user details and does calculations for total price and price per night, once confirm is selected it will give message booking is confirmed and booked.
- The booking location hover over the square allows the users to view rooms and price and image of what they are getting and capacity.
- Will also follow assignment requirements checking if booking is available, it doesn't go back date and can be current or future date etc
- <<Instructions>> - will have a numbering from 1 to depending on how many steps there are to help user use the booking system. (like the example on the assignment requirements and example layout)
